# Changes in Commercial Text for Beginning Readers: What Are Kids Asked to Do? 

DR. KATHLEEN J. BROWN
UNIVERSITY OF UTAH READING CLINIC, DIRECTOR EMERITUS
APRIL 2I, 2023

## We Would Do Well to Remember...

Thorndike's Laws of Learning (1903)

- exercise (practice)
- identical elements (keep some stuff the same)
- readiness (appropriate rigor/pace for new stuff)
- effect (learner appreciates outcome)

These laws influenced "vocabulary control" aka word choice in commercial reading programs.

## Applying Thorndike's Laws

Text written and produced by publishers
(e.g., Scott Foresman, Ginn, 1930-1985)

- emphasized Whole Word a.k.a. Look-Say method
- heavy use of high frequency words (e.g., look, said)

1956 Scott Foresman Preprimer \#1 used 17 unique words at least $12 x$ each

Are T's Laws met? Which ones and how?

Who Is It?
Dick said, "Who is here? Who is it, Mother?"

Mother said, "It is Dick."
"Oh, Mother," said Dick. "You can see who it is."

## After Indictments by Flesch, 1955 \& Chall, 1967

- phonics skills not represented in text (primarily high frequency words (e.g., Dick and Jane)
- 1965+ some publishers applied Thorndike's Laws to create decodable text
- Lippincott
- Sullivan
- SRA-DISTAR
- SRA Reading Mastery
- many of the decodable texts in use today.

## Applying Thorndike's Laws

Are T's Laws met?
Which ones and how?

[^0]Chicago, IL: SRA.

Can Dad fan Nan?
Can Dad fan Dan?
Sad Dad!
Sad Nan!
Sad Dan!

## Thorndike Who? Phonics What?

A whiplash pendulum swing away from basals decodables, and phonics (i.e., stultifying, lack of respect for kids \& teachers' ability, inherently evil).
$\rightarrow 1987$ CA \& 1990 TX single adoption markets drive text re-design. Teachers/Admins in these states were into...

- whole language $\rightarrow$ unabridged literature \& predictable text for K-G2

Martin, B. \& Carle, E. (I967). Brown-Bear, Brown Bear, What Do You See? NY: Henry Holt \& Company. -

## Back to Phonics \& More Changes in Text

## Hue \& cry over 1995 CA NAEP G4 scores = LA (39 ${ }^{\text {th }}$ in US)

- 1997-2000 decodable mandates in CA (75\%) \& TX (80\%)
$\rightarrow$ Changes in 1997+ Core Programs = literature + decodables to be everything to everybody: EL, Tier II, G\&T, balanced literacy...

G1 kids couldn't read the "main selections" even after the teachers read them aloud. Too many unknown words with complex features and not enough repetition too early in the school year (Juel \& Roper-Schneider, 1985; Reitsma, 1983)

DUH.

T's Laws are:

Ants see Nat and Nan.

Are T's Laws met?
Which ones and how?

Nat and Nan sat.

Essential Question
How does your body move?
Read about the fun ways kids can move

How can kids move?
We can move in lots of ways.
We use our bodies to help us.
86

## Heibert , 2005, ESJ; 2009, chapter

Analyzed Scott Foresman, 1962-2007
(only remaining program examined by Chall 1967/1983)

- K = mid year decodables
- G1 \& G2 = main selection texts
- pulled 2,000 words (or 10 units) from a grade level
- coded words: 0-7 zones of frequency in written English:
$\rightarrow$ zones $0-2=H F$ at least $100 x$ in 1 M words $n=930$ words
$\rightarrow 6-7=$ rare only $.01-9 x$ in 1 M words $n=150,000$ words

## Heibert, 2005, ESJ; 2009

## Identified 2 dimensions of text that affects beg readers:

1. \# new, unique words per 100 words (cognitive load) Then, take those new, unique words \& look at linguistic load:

2a. Frequency: \# HF words (zones 1-2), (zones 3-4), rare (zones 5-6)

2b. Decodability of words in zones sorted into categories:

- 1-3 graph/phon 1:1 (at, go)
- 4-5 vowel digraphs (ate, eat)
- 6-7 r-con \& diphthongs (oar, owl)
-8-9 polysyllabic

## What Is a New, Unique Word?

Count new unique words appearing in 100 words. ( $n=54$ ) Nat is at school. Nat sat. What does Nat have? Nat has Sam. Nat does not have Sam!
